"How do you mean?" Colman asked. "Hi," the paunchy man greeted amiably. "I'm Clem. These are Carla and Hermann, and Francine and Boris. The big guy here is Cromwell, and the little lady up top is Amy. Well, I guess... welcome aboard." "You haven't gone to the police," Micky said. "I'm not sure," Kalens replied distantly. Trying to elucidate Stern's motives is akin to peeling an onion. But when you think it through, if there's no resistance, we win automatically, and if there is, then the Chironians will be forced to make the first moves, which gives us both a free hand to respond and a clear-cut justification that will satisfy our own people . . . which' is doubly important with the elections coming up. So really you have to agree, John, the scheme does have considerable merit." dazzle the cognoscenti, not with her beauty, but with her sterling reputation, making it less likely that. "Send the SDs down and proclaim martial law," Borftein grunted from beside Kalens. "They've had their chance. If they've run away and left it for us, let's take it. Why mess around?" "Dr. Doom. They've been together four and a half years now. See, there's even kismet for crackpots.. Bernard shrugged. "What the hell? It's done now. We needed the exercise." "He's what?" "On the other hand, if you mean who's in charge of assigning the equipment up here and keeping track of who's scheduled to do what and when, then that would be Cromwell," Carla said. "He's linked into the ship's main computers and through them to the planetary net." illuminated. But it's medium-to-long range, and for some reason it has to be synchronized with the ship's orbital period." "Arrogant?" Adam smiled to himself. "They're the ones who are so sure they 'know,' not me. I'm just making the best interpretation I can of the facts I've got." He thought for a moment longer. "Anyhow, arrogance and pride are not the same thing. I'm proud to be a human being, sure." "The half that's left is off-limits," Micky declared. "The only pie in play is my piece." Bernard hadn't really thought of that. He saw Jay nodding vigorously, and tossed up his hands. "Why not? :If." "So are you," Colman insisted. "Chironian genes were dealt from the same deck as all the rest. So the codes were turned into electronics for a while, and then back into DNA. So what? A book that gets stored in the databank is still the same book when it comes out." dead wick: One of the three candles burned out, and darkness eagerly pulled its chair a little closer to the. What had impressed him the most was the way the kids seemed to be involved in everything that was going on just as much as the grown-ups. They didn't come across like kids at all, but more like small people who were busy finding out how things were done. In a room two posts back, he had glimpsed a couple of kids who couldn't have been more than twelve probing carefully and with deep frowns of concentration inside the electronics of a piece of equipment that must have cost millions. The older Chironian with them just watched over their shoulders and offered occasional suggestions. It made sense, Driscoll thought. Treat them as if they're responsible, and they act responsibly; give them bits of cheap plastic to throw around, and they act like it's cheap plastic. Or maybe the Chironians just had good insurance on their equipment.. The boy follows his spry companion into this tented blackness. Pulling the tailgate up from the inside is. He looked up. "She wants my kids. How about that, Steve? Come on, I bet it's the same with Kath." Although by his manner he was trying to be seen to make light of it, Sirocco couldn't hide his exhilaration. Nothing like that had ever happened to him before, and he had to tell somebody, Colman saw; but Colman played along.. reassemble them into their original architectures.. He wasn't a diddler. She'd told Micky the truth about that.. He smiled. "Lucky

You are here because you know that I would take the world which he thought would give itself to him, because I represent the strength that he does not, and with me you could survive." Celia looked up again, but Stern's eyes had taken on a faraway light. "Chiron has made fools of the weak, who deluded themselves that it would play by their civilized rules, and now that the weak have fallen, the way is left clear for those who understand that nothing imposes Earth's rules here. It is the strong who will survive, and survival knows nothing of scruples." .voice was even more consoling than her embrace: "Little mouse, you were so quick, so bright, so sweet.. Celia spoke for the first time since sitting down with Veronica and Casey. Until now they had not been fully aware of the reason for Bernard and Lechat's visit. "Either way a wanting won't do any good," she said. "Whether you issue one now or later is academic. He would defy it. You don't know him. The hard core of the Army is rallying round him, and it has reinforced his confidence. He thinks he is unbeatable." .Anita held on to Colman's finger, and he read her action as a silent invitation. He had slept with her a few times, many months ago now, and enjoyed it. However much he had found himself becoming aroused by her attention through the evening, the conversation about pairings and the imminence of planetfall introduced a risk of misinterpretation that hadn't applied before. Being able to look forward to making a stable and permanent domestic start on Chiron could well be what lurked at the back of Anita's mind. When he got the chance, he decided, he would have to whisper the word to Hanlon to help him out if the need arose as the evening wore on.. mind, and courage is the antidote stored always ready in the soul. In misfortune lies the seed of future. "And you're a cop." "It couldn't fire anyway," Kath replied. "It's wiodiflcations aren't completed yet We've already toli~4ou that". "There are ample reasons, verified by universally corroborated experimental results, for postulating that entities possessing the properties ascribed to atoms do indeed exist. Whether or not they are detectable by the senses directly is immaterial. Where are your comparable data?" .She had a friend called Veronica, who lived alone in a studio apartment in the Baltimore module and was very understanding. Veronica could always be relied upon to move out for an evening on short notice, and Colman had wondered at times if she really existed. Acquiring exclusive access to a studio wouldn't have been all that difficult for a VIP'S wife, even with the accommodation limitations of the Mayflower H. She had never told him whether or not he was the only one, and he hadn't asked. It was that kind of a relationship.. charity-funded squeeze engaged in something less than sparkling romantic conversation.. Ahead, the land slopes down toward dark and arid realms.. Jay decided' he'd had enough, excused himself with a mumble, and took his book into the lounge. His father was sprawled in an armchair, talking politics with Jerry Pernak, a physicist friend who had dropped by an hour or so earlier. These are the same hunters who. "Exactly, Jay. What you have is an ascending hierarchy of increasing levels of complexity. At each level, new relationships and meanings emerge that are functions of the level itself and don't exist at all in the levels beneath. For instance, there are twenty-six letters in the alphabet. One letter doesn't carry a lot of information, but when you string them together into words, the number of things you can describe fills a dictionary. "We ought to pass the word to the media for a more appropriate treatment from now on as well," Kalens said. "Perhaps playing up things like Chironian stubbornness and irresponsibility would harden up the public image a bit... just in case. We could get them to add a mention or two of signs that the Chironians might have armed themselves and the need to take precautions. It could always be dismissed later as overzealous reporting. Should I whisper in Lewis's ear about it?" .Pernak tossed up his hands. "I've been to take a look at their university and what they do there. You wouldn't believe it. And I've already got a position if I want it, for no other reason than that people already there say it's okay. You get a house, for nothing . . . a good one. Or they'd build you one however you want it. How can you say no? We're going to become Chironians. And so will everybody else when they've gotten over the voyage. Then people like Kalens can yell all they want, but what can they do if there's nobody left to take any notice? It's as I said-you have to start thinking like Chironians." .Of course, that vehicle hadn't been unique. "Fire at any SD's who get in the way. They know we're here now." He turned to the others. "Grab those two and stick with me. You two, stay with Crosby and cover the rear. Okay, let's get the hell out." .Pernak waited for a moment longer, then put down his fork and leaned across the table. "On Chiron, wealth is competence!" he said. "Haven't you noticed--they work hard, and whatever they do, they do as well as they know how--and they try to get better all the time. It doesn't matter so much what they do as long as it's good. And everybody appreciates it. That's their currency--recognition, as you said . . . recognition of competence." He shrugged and spread his hands. "And it makes a lot of sense. You just told us that's what everyone wants anyway. Well, Chironians pay it direct instead of indirectly through symbols. Why make life complicated?" .THE FIRST BOMB exploded in the center of Canaveral City in the early hours of the morning, causing serious damage to the maglev terminal where the spur line into the shuttle base joined the main through-route from Franklin out to the Peninsula. Subsequent investigations by explosives experts established that it had been carried in a car outward bound from Franklin. The only occupants at the time were eight Terrans returning from a late-night revel in town. They were killed instantly..The subsequent expansion of space followed directly from the Chironian mass-energy-space equivalence relationship: The cooling photon fluid actually transformed into space as well as matter tweeklets, the ratio depending on the temperature and shifting from one favoring tweeklets to one favoring space as the universe cooled down. Thus the galactic red-shifts were not caused by expanding space; the Chironians had turned the whole principle upside down and concluded instead that the expansion of space was a product of lengthening wavelengths. In other words, radiation defined space, and as it cooled to longer wavelengths, space grew. Thus the Chironians had completed the synthesis of tweedledynamics with General Relativity by relating the properties of space to the photon as well as the properties of time. The "islands" of matter tweeklets left behind from the cooling photon fluid remained dominated internally by the strong force while gravitation became the dominant influence In the macroscopic realm created outside, and in many ways they continued to behave as microcosms of the domain from which they had originated..This had been worse than a sucky day. Although this prerogative had been intended as a concession to the unknowns of interstellar flight and to apply only until the termination of the voyage itself, Judge Fulmire had confirmed Kalens's interpretation that technically it would remain in force until the expiration of Wellesley's term of office. The question now was: Could this prerogative be extended to whomever became chief executive of the next administration, and if so, who was empowered to write such an amendment into law? The full Congress could, of course, but wouldn't, since that would amount to voting away its own existence.
